

Guidelines for setting quality Question Paper

You are requested to comply with the following **Guidelines** while setting the question papers.

- The quality of Question paper indicates Quality of teaching at our institute
- Please design the questions to test higher order cognitive abilities (HOCAs); application and above levels
- Please avoid** designing questions on lower order cognitive abilities (LOCAs) for long answer questions
- Please design** the questions whose outcomes are measurable
- Please set** a valid, reliable and error-free (VRE) question paper which empower students to succeed in placements and higher education
- Every long answer question designed to assess students' HOCAs, should explicitly have scaffolded, well-connected sub-questions testing the students' LOCAs that precede the HOCA, relevant to the CO
- Avoid** giving single-liner questions

Valid Question, An Example

Make it VALID: Use a series of scaffolded, well-connected sub-questions on preceding LOCAs, building student's response step-by-step logically

In this task, you are expected to examine how globalization has influenced cultural practices. [C] - [12]

- (Remembering) Define globalization and list two of its main characteristics [R] - [1+1]
- (Understanding) How do you think the globalization can influence cultural practices in a specific region [U] - [2]
- (Applying) Give an example of a cultural practice that has changed due to globalization in your country [A] - [2]
- (Analyzing) Analyze the positive and negative effects of the change you mentioned on the local community [An] - [1+1]
- (Evaluating) Do you think the cultural change brought about by globalization has had a more positive or negative effect overall? Justify your answer. [E] - [2]
- (Creating) Propose a strategy that communities can adopt to preserve their culture while benefitting from globalization. [C] - [2]

- Prepare two different sets of question papers from prescribed syllabus.
- Ensure that the questions in the paper shall be fairly distributed over the whole syllabus of study and not concentrated on any one or a few portions only and strictly adhere to the template enclosed.
- Set the questions, as indicated in enclosed template, to comply with specified
 - Marks with scaffolding questions
 - Cognitive Domain Learning Levels (CDLL) according to Blooms Revised Taxonomy (BRT)
 - Course Outcomes (COs)
- The quality of question paper means quality of test items (questions). You are requested to design quality questions at appropriate CDLL on targeted COs. Most times we are setting question papers on the spur of the moment compromising the quality of questions. **This is not good.**
 - The best way to set quality question papers is to design test items and add them to your Course Item Bank as the course teaching progresses.**
 - ✓ The test items are to be designed targeting the CO at appropriate CDLL
 - ✓ We can design quality test items only at the time of our class preparation as the course teaching progresses
 - During the time of course teaching, we'll be more into active learning, application level activities. This helps us to design quality test items at application and above cognitive**

levels. You will exhibit mastery in designing test items at the time of teaching that CO.

- iii. At the time of teaching the content targeting a particular CO, please design quality test items on application and above cognitive level at 1:5 ratio of the requirement and record them in your Course Item Bank.
- iv. You are requested to insert the best questions (out of 1:5 items) you prepared, into this Question paper. You will have to go on adding quality questions, as per the format, as and when you complete the content teaching of a particular CO. That means, setting a quality Question paper is a semester-long process.

Now, ample time is given to you to set quality question papers.

You are earnestly requested to follow the above guidelines to set a quality Question Paper.

5. Your question paper should have validity and reliability. For a valid and reliable assessment, you are requested to set questions whose outcomes are measurable.
6. You are requested to design the questions with explicit mention of the Valuation Scheme.
7. Avoid ambiguity, repetition of questions or replication from the model question paper.
8. Draw the figures / drawing / circuit diagram wherever necessary and label the diagrams indicating dimensions, etc., clearly and properly.
9. Ensure that the question paper does not contain any objectionable or unlawful contents.
10. Avoid all kinds of abbreviations. If used, please make a special mention.
11. Indicate clearly on the question paper (in instructions), the need of any code book/ handbook/ data book/ graph sheets required by the candidate for answering the questions.
12. Course content of each unit, in every course, shall have specific Course Outcome (CO), {shown in Table-1} and each question is to be prepared to test the students' knowledge and skills as per indicated Cognitive Domain Learning Level (CDLL), {shown in Table-2} targeting the stated CO, as specified in the template.

Table-1

CO	Covering the contents of
CO1	UNIT-I
CO2	UNIT-II
CO3	UNIT-III
CO4	UNIT-IV

Table-2

Level-1	Remember (R)	Fundamental Knowledge
Level-2	Understand (U)	
Level-3	Apply (Ap)	Knowledge on Application & Analysis
Level-4	Analyze (An)	
Level-5	Evaluate (E)	Critical Thinking
Level-6	Create (C)	

13. The maximum marks for the question paper is **60 Marks** and the duration of the examination is **3 hours**.
14. The paper setters shall note that the **question number 1** should contain **Twelve** short answer questions, **carrying each one mark**, covering all four Units of the syllabus as per template. Set these questions whose outcomes are measurable.
15. **Question numbers 2 to 5**, will have internal choice as indicated in the template.
16. Ensure confidentiality regarding question papers and the contents therein.

Attention is specifically drawn to the following guidelines:

- a) The questions are to be planned in such a way that a candidate of certain ability with good preparation can reasonably be expected to answer the required number of questions within the allotted time frame of three (3) hours.
- b) Every question shall be clear and definite in language and meaning.
- c) Special care must be taken while writing mathematical symbols, equations and indexing figures.

The question papers along with duly filled-in remuneration bill must be sent to the following e-mail, during the last instruction week of the course work.
